

AnyCam 2.4.0 — Final Release Audit Report

Final release of the 2.4.0 line. Code is identical to 2.4.0-rc4.0. Field-validated on 2026-05-07 against the secondary network (non-Microseven cameras); Microseven re-test was deferred at user's request given clean primary-network behavior and the locked-camera fix path being internally consistent.

Release-line summary: 2.3.0 → 2.4.0

The 2.4.0 line built on 2.3.0's single-socket cred-auth refactor and brand-static rate_limit_per_ip_tcp data. Across the rc series, the focus was hardening the camera scan and stream-handling code against a real-world Microseven .22 firmware-level lockout that surfaced under load, plus adaptive enhanced-view UX work. Final shape is significantly more resilient under multi-camera scan pressure than 2.3.0 was.

RC chronology

Build	Headline
2.4.0-rc1.0	Adaptive enhanced view foundation
2.4.0-rc2.0	streaming_recipe data scaffolding for DVR-family work
2.4.0-rc2.x	Throttle-aware probing infrastructure refinements
2.4.0-rc3.1	env-var pipeline + CFG_ADAPTIVE_QUALITY gating
2.4.0-rc3.2	Resolution-dropdown grey-out, card position, JS cleanup, snapMode oscillation
2.4.0-rc3.3	focus_leave_kill, Connecting/Switching toasts, JS cleanup follow-on
2.4.0-rc3.4	Transport-flip dead-end fix, X-Stream-Status per-run frame count
2.4.0-rc3.5	Throttle plan Leak E + F + G + Aggressive Cooldown Detection
2.4.0-rc4.0	Leak G tightening — fires for already-locked cameras
2.4.0	Final release (this build)

Verification

verify_release.py: all 5 sections passed (compile + top-level definitions, function contracts, throttle field validation, best-practice audit, version consistent at 2.4.0, CHANGELOG top entry matches).

Path forward

Next major version is 2.5.0, beginning with 2.5.0-rc1.0 (Lorex/Dahua DVR Family Support). If 2.4.0 surfaces field issues against Hipcam-family hardware specifically (the deferred .22 test class), they will be addressed in a 2.4.x patch outside the 2.5.0 line.

Files changed (vs 2.4.0-rc4.0)

File	Change
camera_discovery.py	CURRENT_VERSION → 2.4.0 (drop -rc4.0 suffix)
config.yaml	version → 2.4.0 (drop -rc4.0 suffix)
CHANGELOG.md	Prepended 2.4.0 final-release entry
