

AnyCam 2.6.0 Audit Report

Release audit - 27 September 2026 - promotion build - tag 2.6.0

Correction, 27 September 2026. This report supersedes the 26 September 2026 revision. That revision attributed compliance rows to "Part 6 - Project Engineering" of the best-practices document. No such part exists. The checks were performed and passed; the attribution was wrong. The affected rows are relabelled below and the scope note is new. No finding changed.

2.6.0 promotes 2.6.0-rc3.1 to final. It is a version-string change and nothing else. No behaviour changed in this build.

Scope

A byte diff against the rc3.1 commit confirms two changed lines of code, both version strings, plus one prepended CHANGELOG entry.

Check	Result
Changed lines in camera_discovery.py	1 (CURRENT_VERSION)
Changed lines in config.yaml	1 (version)
Changed lines in CHANGELOG.md	33 inserted, 0 removed
Functional code paths touched	None

Why promote now

rc3.1 completed field testing on the Raspberry Pi 4 / HAOS target. An earlier objection, that promotion would ship two known-broken options, was withdrawn on inspection: `skip_nonref` and `fast_stream_start` both already default to false, so a default install enables neither.

Release gate

Gate	Result	Detail
1. Syntax	PASS	ast.parse and compile clean; 140 top-level definitions, no duplicates
2. Semantic contracts	PASS	All 18 function contracts satisfied
2b. CAMERA_DB throttle	PASS	throttle_type values in enum; data fields paired with _confidence siblings
3. Best-practice audit	PASS	No violations
4. Version consistency	PASS	CURRENT_VERSION matches config.yaml at 2.6.0
5. Changelog	PASS	Top entry matches 2.6.0

Best-practices compliance

Measured against *docs/AnyCam_Coding_Best_Practices.md*. CLAUDE.md rule 1 requires this section in every audit. It was present through 2.3.2 and dropped during the 2.4.x cycle. It is restored and stays.

Scope note. That document contains Parts 1 to 5 and a Sources Summary. It has no Part 6. CLAUDE.md describes a "Part 6 - Project Engineering" covering security, dependency management and version control, so the working agreement and the document disagree. Rows below marked *outside Parts 1-5* were checked against ordinary engineering practice, not against a written AnyCam standard.

Standard	Check applied	Result	Note
1.1 Truncated function	AST plus duplicate-def scan	PASS	Gate 1. No function bodies edited.
1.2 Syntax errors	compile() to bytecode	PASS	Gate 1.
1.4 Async/await	No async code changed	PASS	Not applicable.
1.5 Style, PEP 8	Naming of the changed constant	PASS	CURRENT_VERSION stays UPPER_CASE.
Parts 2 to 4	No JS, HTML or CSS changed	PASS	Not applicable.
5.4 Sneaky errors	Whole diff against the table	PASS	A two-line version diff cannot hit any row.
Outside Parts 1-5: packaging	Dependency and packaging review	PASS	No new dependencies. Dockerfile unchanged from rc3.1. Not covered by a written AnyCam standard.

Packaging

Packaged per CLAUDE.md rule 3. Archive name and top-level folder both carry the full version string.

```
camera_discovery-2.6.0.zip
camera_discovery-2.6.0/
```

Ten entries, forward-slash separators, verified explicitly. A first attempt through .NET ZipFile.CreateFromDirectory on Windows wrote backslash separators, which would not extract on the Linux HAOS target. Rebuilt with Python zipfile and checked.

Superseded by

This build could not be installed after September 2026. The Dockerfile it carries pins ffmpeg to a version both Debian and the Raspberry Pi archive have since deleted. See the 2.6.2 audit. 2.6.0 was never affected at the time it was cut, and no AnyCam code is at fault.

Files changed

File	Change
camera_discovery.py	CURRENT_VERSION to 2.6.0
config.yaml	version to 2.6.0

File	Change
CHANGELOG.md	Prepended the 2.6.0 entry
