AnyCam 4.1.0 Audit Report

Release audit - 25 October 2026 - D6 and D7, with 4.0.0 - tag 4.1.0

The last step of CrystalHeeler's unattended order of 2026-10-25: 3.9.0, 4.0.0 (C32, audited in its own report), 4.1.0, then push and publish 4.1.0. D6 and D7 follow CrystalHeeler's mock-up and answers of 2026-10-25 (docs/BUILD_PLAN.md).

The changes

Item	Change
D6 header	Port Scan is Scans; the Deeper Scan box and Scan Network leave the header.
D6 chosen hosts	Deeper Scan (nmap -p1-10000) and Scan All Ports (-p-), grey until a host is checked or an address typed. A Deeper Scan runs as a queue, then gives each host's open ports to the scan's own camera probes (the stage-4 code, now _probe_broad_hosts), so a camera gets its card; the port table stays.
D6 rescan	Rescan Entire System with its Deeper Scan box (the old stage 4). The scan counts its new cameras (SCAN_STATE new_cameras); at the first one the page shows the cameras, only from the Scans menu.
D6 Cancel	Cancel now stops the rest of a queue of hosts, and no cameras are looked for.
D7	One Back to Cameras button at the left of the status bar on every menu but the cameras, an accent outline and tint; the per-menu rows are gone; the bar wraps.

Tests run

Suite	Result	Scope
Release gate	**PASS**	Eight gates; contracts for api_pscan_start, run_batch_port_scan and deeper_scan_cards.
Python integration	**PASS**	841 of 841; new section AX (10 checks); T1 updated for the empty-page text.
JavaScript behaviour	**PASS**	225 of 225; 4 new D6 and D7 checks.
Visual (rule 10)	**PASS**	The built page in a browser at 1366x768, 375x812 and 812x375: the Scans menu, the status bar wrapping, Storage and Connect Camera, the Cog panel with the engine row and the warning on a phone.
Field	**NOTED**	Not run: built unattended.

Not tested

- **A real Deeper Scan.** nmap and the camera probes were replaced by fakes in the tests; the change reuses the scan's stage-4 code unchanged.
- **The jump to the cameras** during a real rescan with a new camera on the network.
- **The object engine (4.0.0) live**: see its report.

Best-practices compliance

Standard	Check applied	Result	Note
Rule 7	Version and scope confirmed	**PASS**	CrystalHeeler: 4.1.0 = the UI items.
Rule 10	Overlays and bars fit every screen	**PASS**	Seen at the three sizes.
6 Security	Validate at the boundary	**PASS**	Scan mode from an allowlist.
P1 Python	No duplicated code	**PASS**	Stage 4 and Deeper Scan share one function.
Rule 9 (privacy)	New text	**PASS**	Made-up addresses in tests and the page check.

Files changed

File	Change
anycam_page.py, page_script.py	The Scans menu, the status-bar button, texts.
anycam_scan.py	_probe_broad_hosts, deeper_scan_cards, PSCAN_PORTS.
camera_discovery.py	The scan mode, the queue and Cancel, the new-camera count; 4.1.0.
verify_release.py, tests/	Contracts; section AX; page checks.
CHANGELOG.md, config.yaml, docs	4.1.0; the plan.
