AnyCam 3.8.0 Audit Report

Release audit - 11 October 2026 - stable 3.8.0 - tag 3.8.0

Stable release of the 3.8.0-rc1 to 3.8.0-rc3 line. The code is identical to 3.8.0-rc3; only the version string changes (3.8.0-rc3 to 3.8.0). CrystalHeeler field-tested rc3 on both test systems on 2026-10-11 (Chrome and the mobile Home Assistant app) and reported no bugs, with a faster initial scan. Scope: the version bump only.

What 3.8.0 delivers over 3.7.5

Area	Change
Scan redesign (B54)	ONVIF once with no login first, then brand paths; the scan stops at the first login prompt and leaves an identified camera's other ports alone. Faster, quieter scans.
Non-camera skip (B55)	The scan skips a host with a printer port open, or whose MAC maker is a known non-camera brand; multicast hosts are exempt.
Appliance login	Appliance-camera cards keep their notes and add a login prompt (RTSP walk, then MJPEG and HLS on the web ports), with a clear message when nothing is reachable.
Password entry	Up to two streams by the 0/1/2 rule; stop at the first rejected login; a sub-stream per DVR channel.
Fixes	Login no longer lost on reset-prone cameras; DVR channels enumerate from the RTSP realm; slow login re-syncs; zone drawing works from the Cog menu; appliance notes wording corrected.

Field verification (rc3, 2026-10-11)

- **B55:** the printer host was logged skipped ("printer port open — not a camera, not probed").
- **Appliance login:** the path was exercised and reported "no local camera reachable" cleanly — the designed outcome for an appliance with no local stream.
- **DVR:** eight devices found, six streaming; channels enumerated and recording.
- **No errors or tracebacks** in either field log; remaining warnings are camera-side (Smart Codec still picture, Hipcam lockout) or cosmetic (an HA base-image deprecation notice).

Tests run

Suite	Result	Scope
Release gate	**PASS**	Eight gates at 3.8.0.
Python integration	**PASS**	679 of 679.
JavaScript behaviour	**PASS**	193 of 193.
Field	**PASS**	rc3 field-tested on both systems, Chrome and the mobile HA app; no bugs reported.

Best-practices compliance

Standard	Check applied	Result	Note
5 (versioning)	Full version string	**PASS**	3.8.0 in code, config and changelog.
8 (regressions)	Our code first	**PASS**	All 3.8.0 regressions against 3.7.5 were fixed within the rc line.
1.18 Testing	Coverage	**PASS**	Full suite green; rc3 field-tested.
Rule 9 (privacy)	Release text	**PASS**	No real names or addresses in the changelog or this audit.

Known issues

- **Smart Codec:** a camera using H.264+/H.265+ may show a still picture until Smart Codec is off or the I-frame interval equals the frame rate.
- **Hipcam/Microseven:** a locked camera needs a power cycle; untested on an unlocked Microseven camera.
- **OPTIONS-401 scan stop:** a camera that answers 401 at OPTIONS is stopped at DESCRIBE, not yet at the first OPTIONS 401. Harmless.

Files changed

File	Change
config.yaml, camera_discovery.py	Version 3.8.0-rc3 to 3.8.0.
CHANGELOG.md	Consolidated 3.8.0 entry.
docs	Build plan; this audit.
