

AnyCam 3.0.0-rc1.1 Audit Report

Release audit - 02 October 2026 - module split, stage 2 - tag 3.0.0-rc1.1

3.0.0-rc1.1 is the second step of build plan E1. AnyCam's behaviour is meant to stay the same. CrystalHeeler, 2026-10-02: '3.0.0-rc1.0 is stable. Move to next phase.' Built: motion detection, motion recording, night boost and the Storage tab moved to their own files. Not built: go2rtc, the scan, the password entry path and the snapshot loop stay in the main file.

What moved

File	Content	Lines
anycam_motion.py	58 functions and classes, 37 constants and state objects: detection, the pre-roll buffer, recording, per-camera settings, night boost, the sunrise check, the Home Assistant calls, the four motion endpoints	1,354
anycam_storage.py	The five Storage tab endpoints	147
anycam_host.py	The link between the files (new code, 44 lines)	44
camera_discovery.py	13,125 lines in 3.0.0-rc1.0	11,667

Design: how the files connect

camera_discovery.py is the entry point and imports the other files. They cannot import it back: Python would load a second copy of it, with its own cameras and state. The split files get what they need the other way:

Mechanism	Use	Count
NEEDS list	Names copied onto the module once, at start-up, by anycam_host.bind(). For functions (snap_loop, _stop_proc) and for objects changed in place (CAMERAS).	22 names
H.name	Read from camera_discovery.py at the moment of use. For values that file replaces while it runs.	2: _FOCUSED_CAMERA, _FOCUS_ENGINE, one line
Imports back	camera_discovery.py imports the 15 names it calls from the two new files.	15 names

go2rtc did not move. Its functions assign _FOCUSED_CAMERA and _FOCUS_ENGINE under a global statement; in another file that statement would create a separate value. It needs a link that can write, which is a change in behaviour risk and was left out of this step.

Evidence that nothing changed

Check	Result
Every definition, text for text	357 definitions in 3.0.0-rc1.0. After the split: 0 missing, 0 changed, apart from the two H. reads. 257 in the main file, 95 in anycam_motion.py, 5 in anycam_storage.py. The first run found 2 differences (a blank line lost inside build_html and _rtsp_options_fingerprint by the split script); both were restored and the check rerun.

Check	Result
Built page	Identical to 3.0.0-rc1.0's.
Routes	The same set of routes as 3.0.0-rc1.0.
Shared state	camera_discovery._MOTION is the same object as anycam_motion._MOTION; H follows a replaced value.
Packaged zip	Imported from its own folder.

Tests run

Suite	Result	Scope
Release gate	PASS	Eight gates; 6 files compiled; the module list matches the imports and the Dockerfile; 211 top-level definitions, no duplicates; 48 contracts. New: the 22 NEEDS names and the H names exist in the main file and none is replaced at run time.
Gate self-test	PASS	_FOCUSED_CAMERA added to NEEDS: the gate failed. _stop_proc removed from NEEDS: the undefined-name check failed and named both functions. Restored.
Python integration	PASS	289 of 289, unchanged in content. The tests see the files as one namespace: a stand-in is written to every file that holds the name.
JavaScript behaviour	PASS	110 of 110.
Undefined names	NOTED	6 files, 0 new, 4 known (B19).
Not run	NOTED	The add-on was not started on the build PC: it would scan this network. No Docker: the image was not built. The field test (A15) is the first real run.

Best-practices compliance

Measured against *docs/AnyCam_Coding_Best_Practices.md*, Parts 1 to 6. Rows this change touches; the rest carry from the 3.0.0-rc1.0 audit.

Standard	Check applied	Result	Note
1.1 Truncated function	AST, contracts, undefined names	FAIL	Unchanged: probe_http_identity (B19), fix planned right after 3.0.0.
1.2 Syntax	compile() per file	PASS	6 files.
1.6 Function design	File size	NOTED	Main file 11,667 lines, 36% under 2.6.8. snap_loop is unchanged.
1.7 Mutability	Shared state	NOTED	State moved with its code; none added. NEEDS copies are safe only for names never replaced, and the gate enforces that.

Standard	Check applied	Result	Note
1.14 Class design	_Host	PASS	Read-only by design: assignment raises, so a split file cannot write a main-file value by accident.
1.16 Refactoring	Behaviour kept	PASS	Text comparison of all 357 definitions.
1.18 Testing	Tests	NOTED	No new behaviour, no new behaviour tests. Two new structural checks. Coverage gaps unchanged.
6.2 Dependencies	None added	PASS	Gate 7.
6.3 Version control	Commits and gate	PASS	One commit; the gate run before it; tag after.

Known issues carried forward

- **B19** (HTTP identity check) and **B20** (late pictures): the build right after 3.0.0.
- **E1**: go2rtc, the scan, password entry and the snapshot loop are still in the main file.
- The Lorex DVR answers 404 for the sub-stream of channels 4 and 7.
- Skip Non-Reference Frames breaks H.264 cameras (B3).

Acceptance (field test A15)

- The image builds and the add-on starts.
- Arming a camera, the cog settings and the night-mode line work.
- A motion event records, with its pre-roll, to LorexCHn_ files.
- The Storage tab lists, downloads, renames and deletes.
- The log has no line with 'not defined' or 'has not run yet'.

Files changed

File	Change
camera_discovery.py	Motion and storage code moved out; imports and the bind call added. Version 3.0.0-rc1.1.
anycam_motion.py, anycam_storage.py, anycam_host.py	New.
anycam_modules.py, Dockerfile	Three more files.
verify_release.py	NEEDS and H checks.
tests/	One-namespace view of the files; the name check covers every file.

File	Change
docs, CLAUDE.md, README	How the files connect; build plan.
CHANGELOG.md	3.0.0-rc1.1 entry.
