AnyCam 3.8.4 Audit Report

Release audit - 20 October 2026 - B68, B69 - tag 3.8.4 (local)

A fix release with the scope and version CrystalHeeler named on 2026-10-20: two dialog bugs reported with a screenshot of the camera settings. Built and tagged locally; CrystalHeeler said not to push or publish yet.

B68: text ran over the next line

Part	3.8.4
Cause	3.8.2 (B67, rule 10) capped each dialog's height and let it scroll. A dialog is a flex column, and flex items shrink by default, so a tall dialog first squeezed its parts. Measured in the browser pane on 3.8.3 at 1366x768 with five zones: the zone peaks line held 66 px of text in a 15 px box and covered "Detection in zones only".
Fix	.modal>* { flex-shrink: 0 }: every part keeps its height; the dialog scrolls.
Guard	Release gate R10 fails without that rule; test AT1.
Check	After the fix, at 1366x768, 812x375 and 375x812: the peaks text ends 12 px above the checkbox row; in all six dialogs no part's content is taller than its box; each dialog stays inside the screen with its buttons in view.

B69: a drag out of a dialog closed it

Part	3.8.4
Cause	A click goes to the nearest element under both the press and the release. Pressing in the rename field and releasing outside the dialog sent the click to the backdrop, whose handler closes the dialog.
Fix	One capture-phase listener records where each press began; a click on a .modal-backdrop whose press began elsewhere is stopped before the backdrop's handler. It covers every dialog, not only Rename.
Check	Page tests B69; in the browser pane, Rename and the camera settings stay open after a press in a field and a release on the backdrop, close on a press and release on the backdrop, and close with Cancel.

Tests run

Suite	Result	Scope
Release gate	**PASS**	Eight gates; R10 with the new flex-shrink check.
Python integration	**PASS**	773 of 773; new section AT.
JavaScript behaviour	**PASS**	210 of 210; new B69 checks.
Visual (rule 10)	**PASS**	Three screen sizes, measured in the browser pane.
Field	**NOTED**	Not run yet.

Not tested

- **The HA phone app.** Touch presses start the same pointer events, but the app was not available here.
- **A real mouse drag.** The browser pane run sent the pointer and click events from a script.

Best-practices compliance

Standard	Check applied	Result	Note
Rule 10	Overlays fit	**PASS**	The B67 cap no longer squeezes content.
8 (regressions)	Our code first	**PASS**	B68 came from AnyCam's 3.8.2 styles.
Part 2 JS	No global side effects beyond the need	**PASS**	Two listeners; only backdrop clicks are affected.
Rule 9 (privacy)	New text	**PASS**	No names or addresses.

Files changed

File	Change
anycam_page.py	.modal>* keeps its height.
page_script.py	The backdrop click guard.
verify_release.py	R10 checks the rule.
tests/	AT1; page checks B69.
CHANGELOG.md, config.yaml, camera_discovery.py, docs	3.8.4; build plan (B68, B69 done; B70-B72 from CrystalHeeler's 3.8.2 log).
