

AnyCam 3.0.0 Audit Report

Release audit - 02 October 2026 - the 3.0.0-rc1.x series as a release - tag 3.0.0

CrystalHeeler, 2026-10-02: "rc1.5 testing is complete. it works", with the order to push and publish 3.0.0. 3.0.0 is the code of 3.0.0-rc1.5 with the version number changed in camera_discovery.py, config.yaml and CHANGELOG.md. No other line of code changed. Each release candidate has its own audit report; this report covers the series against 2.6.8, the last published release.

1. The series

Build	Content	Field test
3.0.0-rc1.0	Tests in the repository and gate 8 (E7); three unused endpoints removed (E6, E8); credentials removed from every log line (E4); camera tables and page script in their own files	A14: stable
3.0.0-rc1.1	Motion, recording, night boost; the Storage tab	A15: working
3.0.0-rc1.2	go2rtc	A16: stable on both systems
3.0.0-rc1.3	probe_http_identity restored (B19)	A17: scans unchanged
3.0.0-rc1.4	Empty page text (B21); scan tests; the scan and the probers	A18: working on both systems
3.0.0-rc1.5	Cancel fixed (B22); type hints complete; tests and moves for password entry, the snapshot loop, the Enhanced View engine, brand identification, the page builder	A19: works on both systems

2. Against 2.6.8

Measure	2.6.8	3.0.0
Python files of the add-on	1	14
Lines in camera_discovery.py	18,198	1,797
Tests in the repository	none	448 server, 114 page, undefined-name check
Release gates	7	8 (gate 8 runs the tests)
Functions without full type hints	27 (E5 count)	0
Behaviour changes	-	Cancel works (B22); brand lookup from a web page works (B19); passwords with @ fully removed from addresses; empty page text (B21); three unused endpoints removed

Every move kept the moved code unchanged: after each one, all definitions were compared text for text with the code before it (357 to 363), and the built page and the routes were identical.

3. Field evidence for 3.0.0-rc1.5

Check	Result
Error lines	0 'not defined', 0 'has not run yet', 0 tracebacks, 0 ERROR lines in the logs from both systems.
Password entry	Accepted on both systems. The DVR's 7 channel cards were registered in 3 s.
Live cards	The DVR channel cards after CrystalHeeler fixed the DVR's sub-stream setting; the PTZ card after its password was entered again (B25).
Motion	Live detection on the two armed DVR channels.
Cancel	Confirmed by CrystalHeeler.

Tests run for this release

Suite	Result	Scope
Release gate	PASS	Eight gates, including the build inputs online.
Python integration	PASS	448 of 448.
JavaScript behaviour	PASS	114 of 114.
Undefined names	PASS	14 files, 0.
Packaged zip	PASS	Imported from its own folder.
Not run	NOTED	No new field test: the code is that of 3.0.0-rc1.5, field-tested as A19. The image was not built on the build PC.

Best-practices compliance

Measured against *docs/AnyCam_Coding_Best_Practices.md*, Parts 1 to 6. The code is that of 3.0.0-rc1.5; its audit holds the full table. Rows for this release:

Standard	Check applied	Result	Note
1.1, 1.2 AST and syntax	Gate 1	PASS	14 files.
1.14 Type checking	AST count	PASS	0 functions missing a type.
1.18 Testing	Gate 8	PASS	448 and 114 checks.
6.3 Version control	Version in every place	PASS	Code, manifest and changelog heading in one commit; tag 3.0.0.
Rule 9 (privacy)	Release text	PASS	Changelog, release notes and this report: no names, places or addresses.

Known issues

- **B23:** adding a camera by hand with protocol WebRTC fails.
- **B24:** one password-entry step does not pace rate-limited cameras.

- **B25:** a camera's streams are read only at password entry; enter the password again after changing a camera's stream settings.
- **B20** (late pictures when a sub-stream fails): fixes approved, not built.
- Skip Non-Reference Frames breaks H.264 cameras (B3); the toggle is to be removed (C11).

Files changed from 3.0.0-rc1.5

File	Change
camera_discovery.py, config.yaml	Version 3.0.0.
CHANGELOG.md	The 3.0.0 entry.
docs/BUILD_PLAN.md and .html	A19 and E1 done; 3.0.0 is the current release.
docs/audits/	This report.
