AnyCam 4.1.1 Audit Report

Release audit - 26 October 2026 - C33 and B87 - tag 4.1.1

Scope confirmed by CrystalHeeler on 2026-10-26: C33, B87 and B88, then push and publish. B88 was built, replayed and taken out (below). The 172 system's log under 4.1.0 showed no problem first: the upgrade check passed for both cameras and live view connected in 0.4 s.

The changes

Item	Change
C33	Recording names: ---, parts -part01, -part02; dashes only, never underscores (CrystalHeeler, 2026-10-26). The Storage tab reads the zone from old (_partNN) and new (-partNN) names; older files keep their names.
B87	The object engine confirms an object when its net travel, first place to last, is 3% of the picture's width and at least half of all it moved (OBJ_MIN_STRAIGHT 0.5). A shadow shaking out and back (25 Oct 19:40:38, 26 Oct 07:26:59) moves a lot and gets nowhere.

B88, taken out

The headlight test inside the slow-movement check (one-sided, scattered changes against the 5 s picture) was replayed on 535 recordings: it stopped 2 of 13 headlight files on driveway-left and lost 7 people, among them a person walking up to the back-yard camera at night and people coming out of the front door. Two positions of one person 5 s apart look scattered to that test. The object engine also records 9 of the 13: they are cars driving on the street inside the gravel zone and the zones over the neighbours' yards. B88 is back to Discuss; the fix is zones clear of the street.

Evidence: the replay

Recordings (535)	4.1.0	4.1.1
People, the cat, vehicles arriving	all recorded	all recorded
Shaking shadows on the patio camera (4)	3	2
Nothing visible	-	1 fewer
Headlights (driveway-left, 13)	11	11

The add-on's _motion_feed replayed every recording of the 4.1.0 field night (patio, driveway-left, back yard: 126) and the 409 of 20-25 Oct, with the settings copy of 25 Oct 15:27.

Tests run

Suite	Result	Scope
Release gate	**PASS**	Eight gates; a contract for track (net travel, straightness); the recording contract now requires the dash names.

Suite	Result	Scope
Python integration	PASS	846 of 846; new section AY; L14, AG10, AR6, AU8 and O10 updated for the dash names.
JavaScript behaviour	PASS	225 of 225; no page change.
Recording replay	PASS	535 recordings, 4.1.0 against 4.1.1, and four variants to find B88's losses.
Field	NOTED	Not run yet.

Not tested

- **The new names on the Pi:** ffmpeg's segment muxer with -part%02d, and the rename of a lone -part01 file (tests use stand-ins).
- **The Storage tab** with old and new names side by side, on a phone.
- **B87 live.** The replay decoded files with OpenCV.

Best-practices compliance

Standard	Check applied	Result	Note
Rule 2	Logs before code	PASS	Both field logs and 244 recordings read first.
Rule 7	Version and scope confirmed	PASS	CrystalHeeler, 2026-10-26; B88 left out after the replay.
File names	Dashes, never underscores	PASS	Recordings and this report; Python modules that are imported keep underscores.
P17 Testing	Tests with the change	PASS	Section AY; the replay.
Rule 9 (privacy)	New text	PASS	No addresses or names.

Files changed

File	Change
anycam_motion.py, anycam_zones.py	C33: the dash names; reading old and new.
anycam_objects.py	B87: net travel and straightness.
verify_release.py, tests/	Contracts; section AY; tests for the names.
CHANGELOG.md, config.yaml, camera_discovery.py, docs	4.1.1; the plan (C34, D8 added).
